DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on July 11, 2005 has been entered.

Claim 1 is currently pending in this application.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Art Unit: 2871

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Kim et al. (Kim, USPN 6,567,144 B1).

As shown in Figs. 6-8, Kim discloses a liquid crystal display comprising:
a first substrate 100 having a first electrode 10 (common electrode);
a second substrate 200 having a second electrode 20 (pixel electrode)
corresponding to a pixel;

liquid crystal having negative dielectric anisotropy sealed between the first and second substrates (col. 4, lines 56-59); and

a structure 17(171) which is provided on at least the first substrate 100 to control an alignment of the liquid crystal,

wherein the structure 17(171) on the first substrate 100 has a linear protrusion structure 17, an auxiliary protrusion structure 171 extending from the protrusion structure 17 and opposing to each of facing end portions 19 of the second electrode 20, and a width of the auxiliary protrusion structure 171, where it connects to the protrusion structure 17, wider than a width of the protrusion structure 17 as shown in Fig. 8.
